### Abstract of JP2000076029

**PROBLEM TO BE SOLVED:** To efficiently acquire even data transmitted from the image fetching device of any maker and to print them with high quality at all the time. **SOLUTION:** An image processor 12 of an image printer inputs data transmitted from an image fetching device 1 to a network through an input I/F 11, separates them into image data and the other data containing profile data and network address and respectively stores the image data in an image buffer 12b and the other data in a profile buffer 12a. Next, when the profile data of the same address as a network address acquired this time are not preserved in a profile data storage device 14, the data containing the network address and profile data acquired this time are stored and preserved in the profile data storage device 14.
